

Sawt al-Tameen

The voice of insurance

AssemblyAI voice agent for pre-authorisation

Prepared by the assistant. Decided by a person.

Pre-authorisation intake

The clinic needs a clear next step

A request starts with identity, procedure, cost and date.

Missing documents need a specific follow-up.

The reviewer needs the case and its conversation.

The voice of insurance

Pre-authorisation desk

A clearer path to pre-authorisation.

Talk through your request. We'll help prepare it for review.

English call

Before you call
Keep these details nearby. Tick each item when you have it ready.

 Provider number

 Member policy number & date of birth

 Procedure code & treatment date

 Estimated cost in AED

Your conversation
Pre-authorisation voice assistant

Not connected

Let's take it one step at a time.
Start a call when you're ready.
Your English-language transcript will appear here.
Speak naturally. The assistant will guide you.

Audio setup

Device speakers — echo protection

Start call

End call

Interrupt & speak

Microphone access is requested only after you start.

Did the assistant hear something wrong?

Type the correct name, number, or detail...

Send correction

Corrections are saved and sent. If the assistant does not confirm the detail, say it again using "Interrupt & speak".

A little guidance
With device speakers, tap "Interrupt & speak" and then speak once the reply starts. With headphones, select the headphones setting before calling to speak over a reply.
Your words appear in the conversation as the assistant recognises them. The text may change until the assistant finishes hearing that turn. To correct a detail, interrupt and say it again; ask the assistant to read it back.

Supporting documents
Have your case reference ready. [Open the document desk](#) to submit requested documents, then return to this call and ask for a recheck.

Prepared by the assistant.
Decided by a person.
The assistant can create and assess a case. Only an authorised human reviewer can approve or deny it.

[Return to your conversation](#)

Keep your case moving.

Find your case, submit the requested documents, and return to the assistant for a recheck.

Find your case

Case reference

PA-D52DP0XF

Access key

.....

Use the access key provided by the desk operator. It stays in this tab and is cleared when you close it.

Find case

Document received and registered. Updated requirements are shown below.

PA-D52DP0XF — information collection

Refresh requirements

Still needed

All currently requested information is registered.

Document type

prior treatment record

Supporting file

Choose File | No file chosen

PDF, PNG or JPEG. Up to 10 MB per file. Use synthetic documents when testing.

Upload document

Received documents

clinical notes: Synthetic-test.pdf

Download

operative plan: Synthetic-test.pdf

Download

prior treatment record: Synthetic-test.pdf

Download

After submitting the requested documents, return to your conversation and say: "The documents for PA-D52DP0XF are uploaded. Please recheck the case."

Prepared for review. Final decisions remain with an authorized person.

Human decision authority

The voice agent prepares a recommendation

No approval or denial tool

Reviewer role required for a final decision

Completed transcript required before sign-off

Recommendation and decision retained separately

Evidence from the prototype

393

Python tests passed

46

Browser and audio tests passed

26 public deployment checks passed

Two completed AssemblyAI conversations with a synthetic caller

Limits: procedure readback, physical echo and varied accents

Business value and the next pilot

A pilot for insurer intake teams

Measure handling time and repeated calls

Track document completeness and identifier accuracy

Compare cost per completed case

Business hypothesis. No measured customer savings yet.

Try the agent and inspect the source
